SUMMARY

M.S. candidate in Business Analytics with experience translating customer and marketing data into recommendations. Strong foundation in Python, SQL, experimentation, and statistical modeling, with experience presenting insights to stakeholders. Interested in product analytics focused on customer behavior, performance metrics, and AI-assisted analysis.

EDUCATION

Master of Science in Business Analytics, Rady School of Management 06/2026
University of California, San Diego, CA
Coursework: SQL and ETL, AI-Assisted Math & Programming for Business Analytics, Customer Analytics

Bachelor of Science in Business Economics 05/2025
University of California, San Diego, CA
GPA: 3.7
Minors: Marketing, Literature/Writing
Coursework: Consumer Behavior, Market Research, Promotion and Brand Management

EXPERIENCE

CO-VP of Marketing, Undergraduate Economics Society, La Jolla, CA 05/2024 - 05/2025
• Built and implemented an event planning workflow to streamline committee communication and reduce content turnaround time from 7 days to 5 days
• Analyzed engagement and content performance trends to improve campaign effectiveness, contributing to 58% higher student engagement, 50% higher event participation, and 86% greater visibility
• Partnered with the Instagram Reels team to plan, produce, and publish short-form content, using performance insights to support event promotion and brand visibility

Social Media Intern, ISSO San Francisco, San Francisco, CA 06/2024 - 08/2024
• Analyzed daily content performance across captions, photos, graphics, and short-form video to identify audience behavior patterns and improve channel performance
• Conducted competitive, target market, and platform analyses to evaluate channel performance and identify opportunities to improve visibility across online platforms
• Produced stakeholder-facing reports with content metrics, audience insights, and recommendations that helped increase reach by 894.5% and engagement by 273% over 3 months

PROJECTS

Student, Intuit Upgrade Customer Segmentation Project 01/2026
• Built logistic regression and neural network models to predict customer purchase probability and improve targeting strategy, generating an estimated 114% return on marketing investment
• Wrote Python code using Polars, scikit-learn, and data visualization libraries to evaluate customer segments and compare campaign opportunities
• Presented findings and recommendations to product and data science stakeholders, translating model outputs into clear business-facing insights

Student, FiTech Credit Card Design Optimization Case 03/2026
• Designed a full-factorial experiment across 12 credit card products and 3 customer risk segments, allocating 144,000 test emails to evaluate the most profitable offer strategy
• Built a binomial GLM in Python and Polars to model response rates and estimate profit per email using customer lifetime value, response, and campaign cost inputs
• Recommended a segment-specific rollout projected to generate about $846K in Round 2 profit, showing that the highest-response offer was not always the highest-profit option

SKILL & COMPETENCIES

Technical: Python, SQL, R, Stata, Polars, scikit-learn
Analytics: Experiment Design, Statistical Modeling, Customer Segmentation, Performance Analysis, Data Visualization, Competitive Analysis
Additional: Stakeholder Communication, Insight Storytelling, Audience Research, AI-Assisted Analysis
